uvXcel Overview

- **uvXcel** - is contradictorily a startup that has been set up by a group of like minded friends with collective professional experience of over a century (About 140 years and counting) in various domains and computer science technologies.
- Each individual comes from similar culture, family background, academic qualification and more importantly with **strong trust, values, principles, ethics and ambitions**.
- The core is to leverage the discrete yet associated experience to **partner with our clients/ businesses** to simplify their operations, provide advanced technology frameworks to make their business processes efficient, and enable them to self-propel through smart cognitive digital solutions.
- The wide variety of expertise ranging from **Infrastructure Services, Business Intelligence, Data Architecture & Enterprise Applications, eCommerce, eLearning, Mobile Applications, AI & ML and IoT** simply implies that **uvXcel** has a lot to offer **under one umbrella**.
- We aim to emerge as the **preferred technology partner for our clients/ businesses**, by powering them through innovative focused solutions for their real-life problems with the right blend of **time, cost and quality** that will **assure the projected growth**.
- We strongly believe that the right partnership and collaboration lays the foundation for sustained growth and excellence, **thus, United We Excel**.

Mission - Enabling our partners to succeed and self-propel their businesses through innovative digital solutions.

Infrastructure Management

- OnPrem Infra Management
- Cloud Management
- Hybrid Management
- Database Management
- Network & Storage Management
- Backup & Recovery Management

Enterprise Applications & Data Architecture

- Business Centric Architecture
- Smart & Adaptable
- Collaboration & Governance
- Secure & Resilient
- Robust & Scalable
- Centralized Management

Business Intelligence

- Data Sources Management
- Data Warehousing
- Real-time BI
- Corporate Performance Management (CPM)
- OLAP (Online Analytical Processing)

SERVICES

eCommerce

- eCommerce Product Development and Integration
- eCommerce Platform Analysis, Fitment, Recommendations
- eCommerce Platform Services and Implementation
- Omni-Channel Implementation
- Integrations with Backoffice Systems like WMS, OMS, ERP, Logistics

eLearning

- Interactive Web-Based Learning
- Simulation Based Learning
- Scenario Based Learning
- Gamification
- SaaS Application Offerings
- Individual Applications
- Custom Learning Modules

Mobile Applications

- Mobile App Development
- Cross Platform
- UI/ UX and Security
- Digital Innovation
- Connecting across touchpoints

SOLUTIONS

-
- Infrastructure Management
 - Cloud
 - Hybrid
 - On-Prem
 - e-Commerce
 - e-Learning
 - Enterprise Applications and Data Architecture
 - Mobile Applications
 - Business Intelligence

AREAS OF EXPERTISE

USP

PRODUCT ENGINEERING

- Ideation & Conceptualization
- Business Analysis
- Architecture & Design
- Development
- Test Automation
- Release Management & DevOps
- Sustained Engineering & Support

CURRENT ENGAGEMENTS

WWW.UTTR.IO

Current Engagements - eCommerce

- **Customer Outreach - Improve Website to Capture New Customers**

Tracking webpages consumption and user behaviour to improve the website for better outreach with new and existing customers. Work on the frontend and backend to deliver the correct information (data maps, charts, and forms) as per the customer heatmap on the website. Improve the website content and increase localized SEO to capture more customers by delivering the right content at the right place.

- **Online Email Campaigns - Enhance User Engagement w/ Machine Learning**

Personalized campaign emails to the subscribers and visitors on the website or virtual seminars. Email campaigns addressed to the customer have more chances of getting a response back than a regular one. It helps make the most from a virtual seminar, website visit & online conference, for the visitor and help them to make faster decisions.

- **eCommerce Chatbot - Improving User Experience w/ AI & ML**

Improving User Experience for an ecommerce customer is a big challenge, which is where we step in and implement Artificial Intelligence (AI) and Machine Learning (ML) based modules. Understanding what customers are looking for based on the inputs to the questions will leverage the set of data to be improved and translated in a better way to guide them to the product or service they are looking for OR get status updates on their orders. If a product of interest is identified then the relevant product/s will be shown to the customer to choose from or the relevant categories are shown.

Current Engagements - Data

■ **Data Services:**

- Built team to perform ongoing standardized framework and configuration based ETL development using SQL Server Integration Services for 35+ clients to track telecom data into a centralized data repository
- Built team to deliver ongoing canned standard reports using SQL Server Reporting Services, integrated into portal or subscribed on email or file servers
- Delivered managed PROD Support, DBA and deployment services
- Delivered automated, configuration based data retention solution as per legal requirements and to adhere to GDPR, PII and PCI compliance
- Delivered Migration Services to latest SQL Server version including porting to Geo redundant servers
- Provided managed services to deliver adhoc database development.

Current Engagements – BI & DW

■ **BI & DW Solutions:**

- Right from scratch design, modelling and development of department specific Data Marts and a centralized Enterprise Data Warehouse
- Designed hundreds of facts and dimensions including conformed dimensions and built ETL processes to load them from numerous data sources (files - csv, excel, xml etc and DB's - Access, Oracle, MySQL, SQL Server for different source applications)
- Creation of Tabular model cubes using Azure Analysis services and development of numerous measures using DAX
- Delivered interactive Dashboards using Power BI and Paginated Reports using Power BI Premium to deliver actionable decision making capabilities across different user groups
- Provided managed and secured access through Active Directory Groups, Role based access to analytics and dashboards.
